

PRODUCT PARAMATER

Basic Parameter

| Pipe PTFE lining : DN10~DN600 | | |
|--|--|--|
| Pipeline rubber lining : DN40~DN2000 | | |
| Forward and reverse flow | | |
| Measured value ±1.0% | | |
| ±0.5%, ±1.0% | | |
| Conventional rubber lining : -20°C~+120°C | | |
| High-temperature rubber lining : -20°C~+90°C | | |
| PTFE lining : -20°C~+120°C | | |
| High PTFE lining : -20°C~+180°C | | |
| DN10~DN25 ≤4.0MPa | | |
| DN32~DN150 ≤ 1.6MPa | | |
| DN200~DN600 ≤1.0MPa | | |
| DN700~DN2000 ≤0.6MPa | | |
| 0.3~15m/s | | |
| ≥5µs/cm | | |
| 4 ~ 20 mA(0 ~ 750 Ω load resistance), pulse, control level | | |
| RS485(Modbus-RTU), HART protocol, Profibus protocol | | |
| AC220V; DC24V; DC12V; Battery | | |
| | | |

Basic Parameter

| The length of the straight pipe is required | Upstream ≥5DN, downstream ≥2DN |
|---|---|
| Connection mode | Flange connection, Threaded connection, Sanitary clamp connection |
| Protection grade | IP65, lt can be customized IP68 |
| The environment temperature | -25°C~60°C |
| Power consumption | ≤20W |

Lining Parameter

| Lining material | Main Performance | Applications |
|-----------------|--|---|
| PTFE | 1. The most steady material in plastics | |
| | which is resistible to boiling hydrochloric acid, as | |
| | well as strong alkali and | Strong corrosive mediums such as strong acid and alkali |
| | organic, impregnates. | |
| | 2. Not be perfect in abrasion resistance. | |
| | Having the same abrasion resistance with PTFE. | |
| PFA | Having a strong ability to load pressure | Applicable in state of load pressure |
| | resistance. | |
| | 1. Have the same abrasion resistance with PTFE. | |
| F46 | 2. Resistible for low abrasion. | 1. The same as PTFE.2. Applicable in mediums of low abrasion. |
| | 3. Having strong resistance to load pressure. | |
| | 1. Be of good elasticity, retractility, | |
| Neopropo | and abrasion resistance. | Water, sewage and slurry, mineral |
| Neoprene | 2. Be resistant to low acid, alkali, | serosity of low abrasion. |
| | and salt but not for oxidation mediums. | |
| Polyurethane | 1. Be of good abrasion resistibility. | |
| | 2. Not be perfect in acid/alkali resistance. | Applicable in mineral serosity, slurry |
| | 3. It can't be used for water mixed | and coal slurry of high abrasion. |
| | with organic impregnants. | |

PRODUCT PARAMATER

Electrode Parameter

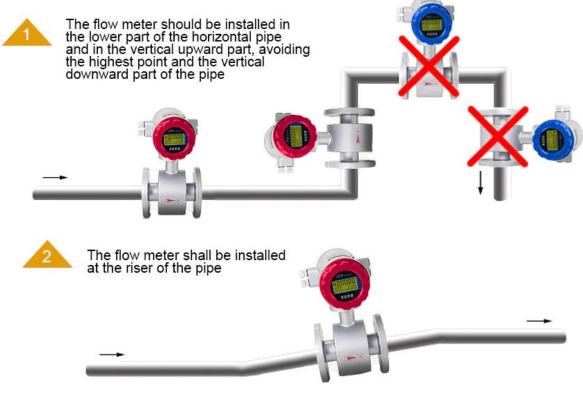

| Electrode material | Applications | | |
|---|--|--|--|
| Stainless steel SS316 | Applicable in water, sewage, and corrosive mediums. Widely used in industries of petrol, chemistry, carbamide, etc | | |
| Stainless steel covered with tungsten carbide | Applicable in mediums of no corrosive and low abrasion. | | |
| Hastelloy B (HB) | Having strong resistance to hydrochioric acid of any consistency which is below boiling point. Also resistible against vitriol, phosphate, hydrofluoric acid, organic acid, etc which are oxidable acid, alkali, and non-oxidable salt. | | |
| Hastelloy C (HC) | Be resistant to oxidable acid such as nitric acid, mixed acid as well as oxidable salt such as Fe ³⁺ , Cu ²⁺ and seawater | | |
| Titanium | Applicable in seawater, and kinds of chloride, hypochlorite salt, oxidable acid (including fuming nitric acid), organic acid, alkali, etc. Not resistant to a pure reducing acid (such as sulphuric acid, hydrochloric acid) corrosion. But if acid contains antioxidant (such as Fe ³⁺ , Cu ²⁺) is greatly reduce corrosion. | | |
| Та | In addition to hydrofluoric acid, fuming sulfuric acid, alkali remaining outside chemicals, including boiling hydrochloric acid | | |
| Platinum-iridium | Almost be applicable in all chemical mediums except for aqua fortis, ammonium salt. | | |
